

High-DPI settings

If the *ViewPoint* application window is too small, or parts of it are clipped and hidden (as with the buttons being covered by the window border, as shown here on the right), try changing the High-DPI settings. This may allow Microsoft to display the program correctly, but please note that changing this may cause the Microsoft API for detecting Display resolutions to return the incorrect size (e.g. menu: Help > Info > Displays tab, and menu: Stimuli > Geometry: pixels/window value.)

Right-mouse-click on the application.

Select **Properties** at the bottom of the pop-up menu.

Select the **Compatibility** tab.

Select the **Change high DPI settings** button near the bottom

Check the ☒ **Override high DPI scaling behavior.** checkbox.

Select **System** from the dropdown menu below the checkbox.

Press the **OK** button..

Press **Apply** and **OK** buttons.
